 - (i) To look disappointed
 - (ii) To get annoyed
 - (iii) To be agitated
 - (iv) To make a quarrel

PART B — (5 × 16 = 80 marks)

Question No. 11 is compulsory.

11. Discuss the Do's and Don'ts of a job interview in detail. (16)

12. (a) Elaborate on the different techniques of persuasive speeches. (16)

Or

(b) Draft an email response to a user that has recently filed a customer service complaint. (16)

13. (a) Write a compare and contrast essay on any one of the following topics in about 200 words. (16)

(i) Rural life vs. urban life

(ii) Meeting people online vs. meeting in real life

(iii) Fast food vs. home cooking

Or

(b) Write a set of eight recommendations that are to be made to old people who live alone. (16)

14. (a) Make a checklist for an industrial visit. (16)

Or

(b) Write a precis for the following passage. Also, give a suitable title. (16)

With nearly a quarter of global greenhouse gas coming from all types of transportation, can we keep ourselves off gas-powered vehicles to avoid the worst effects? As more governments push for urgent action on climate change, quite a few companies are betting on their future – that millions of consumers are finally ready for electricity – powered vehicles. Modern battery – powered cars are selling fast and zero – emission planes are coming. These changes, both leading to a more sustainable future, are reinventing how we get from here to there.

Cars and trucks are undergoing their greatest improvement since the automobile's existence more than a century ago. Almost overnight, the era of the electric car has arrived. Electricity has the advantage that it works without smell and with less noise. Global annual sales of electric vehicles are expected to soar from just over 3 million today to 14 million

by 2025. Just a month after Ford unveiled an electric version of the popular F-150, customers had reserved more than 100,000 of them. The price is about \$10,000 above the gas – powered one, but Ford says the electric model will cost much less to maintain. Everything creating a green revolution on the ground is of limited help in the sky for the time being.

High-storage batteries are useless at present when it comes to the technological challenge of launching a few hundred people into the sky and carrying them thousands of miles. No battery yet invented can power, say, a Boeing 747 from New York to London. Promising improvements, however, do add up.

Developments with zero-emission, battery-powered electric engines are already happening in commercial flights, involving trips of limited duration and distance. Airlines specializing in short journeys with small planes will lead the way to electric flight.

Our planet's health depends on zeroing out carbon dioxide emissions by 2050, and yet, by the time table needed to address the climate challenge, the shift away from gas-powered vehicles remains far too slow. Nevertheless, the train has left the station. Someday, electric-powered transportation will be as common as air.

15. (a) Assuming yourself as the proprietor of a reputed company, draft a company profile, (INVENT NECESSARY DETAILS) (16)

Or

- (b) Write a letter requesting an internship in a leading company of your choice. Also, include an impressive resume. (16)
