MICROPYTHON USING RASPBERRY PI PICO

REPORT

Resource Person: Mr. S. Balabasker, AP/ECE, SANCET

Date: 28.08.2023 to 01.09.2023

The Department of Electronics and Communication Engineering (ECE) in association with Electro Spark (ECE Incubation Center) has organized a five days workshop on "Micropython Using Raspberry Pi Pico".

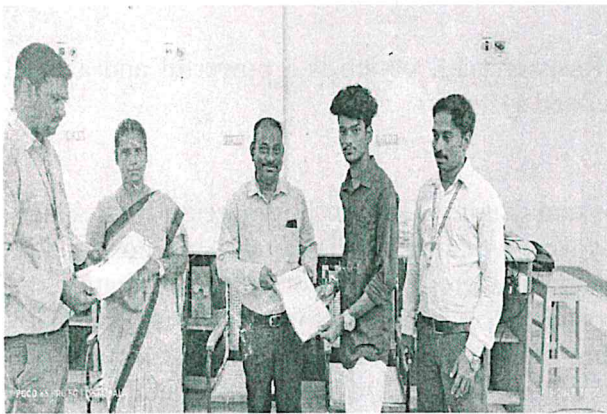

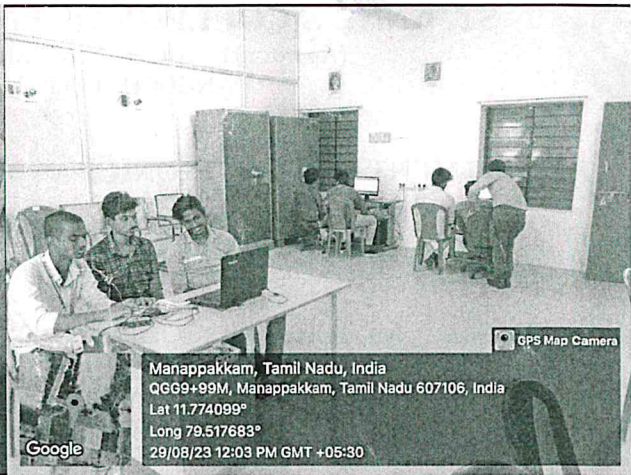

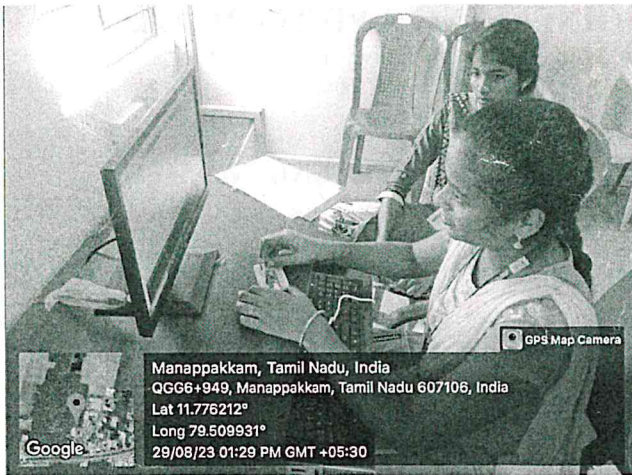

Objective:

To demonstrate the hardware and software portion of Raspberry PI, which is a powerful and a great platform for building low-cost, but highly capable, embedded systems.

Report:

All the Final year students of Department of Electronics and Communication Engineering participated in this workshop. First day of the workshop, the students were taught about basics of Arduino Uno and how to implement it on the basic project. Second day students were taught about pins and features of Raspberry Pi Pico and the students were separated into batches hands-on training was given. Third day students learnt programming in Raspberry Pi Pico using micropython language. On the Fourth day students learned to work in thonny software and wokwi online platform. On the fifth day students were assigned with various task and multiple choice questions test relevant to Raspberry pi pico and Arduino UNO has been conducted. The program ended with the valedictory in which our Principal, Dr.R.Arokiadass, our HOD, Dr. Sr. S. Anita, the resource persons Mr. S. Balabasker, our department teaching and non-teaching staff and students from our department were present. At the end of the session our Principal Dr. R. Arokiadass appreciated the resource persons Mr. S. Balabasker and also issued the certificates to all the students. Finally, the students gave their valuable feedback about their experience in workshop. The session ended in a fruitful manner with a vote of thanks.

Outcomes:

- Students learnt to create interesting applications with basic programming languages.
- Students got hands on exposure on working on Raspberry Pi Pico board with micropython. They are use this training to develop more projects like LED blinking, Traffic Light Control with push button & 8 LED blinking sequence and subsequence using Picoboard.

ANTENNA DESIGN USING HFSS REPORT

Resource Person: Mr. S. Durairaj, AP/ECE,
Mr. R. Radhakrishnan, AP/ECE SANCET

Date: 11.09.2023 to 12.09.2023

The Department of Electronics and Communication Engineering has organized a Two days workshop on “Antenna Design using HFSS”.

Objective:

To demonstrate the Introduction to Communication Systems and various types of antenna, which is a powerful and a great platform for building low-cost, but highly capable in antenna design.

Report:

All the Final year students of Department of Electronics and Communication Engineering participated in this workshop. First day of the workshop, the students were taught about basics of communication systems with research tools HFSS and Designed the Microstrip patch antenna using offset feed techniques which includes the calculation part also. Second day students were taught about Design of Microstrip patch antenna using Inset feed techniques and Assign Excitation and boundary conditions for inset feed techniques hands-on training was given. Students were learned to work under the Design of Circular patch antenna using offset feed techniques with Different types of meta materials and smart antennas.

Outcomes:

- Students learnt to create interesting applications with basic Antenna Design.
- Students got hands on exposure on working on HFSS to design an microstrip patch antenna using offset feed techniques and inset feed techniques.

WORKSHOP ON CREO SOFTWARE

REPORT

The Department of Mechanical Engineering has organized a 3-day's workshop on Creo Software for II and III year Mechanical students during October 14, 2023, October 21, 2023 and November 4, 2023. The course was handled by Mr. K. Shanmuga Elango, AP/MECH of St. Anne's College of Engineering and Technology. During this course, sketching, solid modeling, surface modeling, and assembly were covered. The students ideas were greatly extended by this training course. A total of 42 students participated, and a certificate was provided to every student. The first day of the workshop started with detailed information on PTC and an explanation of Datum's. From the introduction of datum's to the in-depth fundamentals of datum's, one editing feature of a model is covered in the Creo software. In the last session, the parts of creating feature patterns, uses of patterns, creating patterns, and deleting patterns were discussed. Day 2 and 3 gave an introduction to the concepts of advanced modeling tools like sweep, blend, shell, and blend. All the commands were experienced hands-on by the participants on Creo software. The second half of the third day was focused on geometrical dimensioning and tolerances. The three-day workshop began with generating, editing, and modifying the drawing views. The participants asked different questions in the comment sections, which were also actively resolved.

OBJECTIVES:

- To enhance the quality of images, extract meaningful information from images, and automate image-based tasks.
- The objective of the workshop is to give exposure on the digital image processing algorithms which are found in the application such as Biometric, agriculture, communication and remote sensing.

REPORT:

The Department of Electronics and Communication Engineering (ECE) in association with Electronics and Communication Scientia Association (ECSA) had arranged two days' workshop on Digital Image Processing using MATLAB for Third year students on 16.10.2023 and 17.10.2023 at VLSI lab/Embedded lab. The program commenced with the inaugural event in presence of our principal Dr.R.Arokiadass, and Dr .Sr .S. Anita the Head of the department of electronics and communication. The workshop was designed to stimulate students' interest in Image Processing domain for studying theory subject as well as for doing final year project. In first day of workshop students were taught about the introduction of Image processing, Basic programs of Image Processing in MATLAB. The second day of workshop they were taught about the segmentation, edge deduction and filtering of images and practical sessions were conducted. This workshop will help the engineering students and enthusiasts/scholars to get trained in MATLAB package in the aspect of image processing The workshop is designed to stimulate students interest in Image Processing domain by engaging them in a completely purpose driven study environment with hands-on activities while fostering a sense of curiosity and accomplishment .This will open up a door for programming in image processing. PCB DESIGNING USING PROTEUS - REPORT

OBJECTIVES:

- To introduce schematics and electronic prints for manufacturing printed circuit boards.
- To Simulate Electronics Circuits and designing PCB Layouts.
- To create simulations of different electronic circuits.

REPORT:

The Department of Electronics and Communication Engineering (ECE) in association with Electronics and Communication Scientia Association (ECSA) had arranged two days' workshop on PCB Designing using Proteus Software for second year students on 18.10.2023 and 19.10.2023 at VLSI lab/Embedded lab. The program commenced with the inaugural event in presence of our Principal Dr.R.Arokiadass, and Dr .Sr .S. Anita, Head of the department of Electronics and Communication Engineering. Mr.V. Venkatesan, Assistant Professor/ECE, Mr.S.Durai raj, Assistant Professor/ECE, acted as resource person for this workshop. The workshop was designed to stimulate students' interest in Proteus software for PCB designing. In first day of workshop students were taught about the introduction of schematics and electronic prints for manufacturing printed circuit boards. In the second day of workshop they were taught to Simulate Electronics Circuits and to design PCB Layouts. In order to enable the students to create simulations of different electronic circuits on their own practical sessions were conducted in Proteus Software.

This workshop will help our students to get trained in Proteus Software. The workshop is designed to stimulate students' interest in Proteus Software for PCB designing by engaging them in a completely purpose driven study environment with hands-on activities while fostering a sense of curiosity and accomplishment. This will open up a door for doing simulation in Proteus Software.

To test the students' knowledge on this software a mini project contest was conducted at the end of the session. All students participated enthusiastically and designed the circuits on their own using proteus software.

The resource persons verified all the designs done by the students and gave their suggestions and comments. The session ended with Students' feedback.

OUTCOMES:

Upon the completion of the course, students will be able

- To design the Electronic Circuits on their own using proteus simulation software.
- To know about the schematics and electronic prints for manufacturing printed circuit boards.
- To know about the Simulation of Electronics Circuits and designing PCB Layouts.

Workshop on Digital Fabrication for Mechanical Engineers

Objective:

- To know the technological advancements allow innovative manufacturers to iterate multiple designs without excessive waste or expense.
- To realise the practical applications and potential drawbacks of using additive manufacturing, rapid prototyping, and other emerging tech for product development.
- To know the general idea about the 3-D printing.

Outcomes:

Digital fabrication, or digi-fab, means using computer-controlled machinery to create cardinal models of different products. It can also involve making physical items with advanced manufacturing techniques such as rapid prototyping, 3D printing, and CNC machining. Engineers convert digital information with computer-aided design (CAD) files and sophisticated software.
