GUEST LECTURE ON “APPLICATIONS OF NANOSCALE SCIENCE AND ENGINEERING”

The Department of Science and Humanities has organized a guest lecture by Dr. F. Jancy Sophia, Assistant Professor, Department of Chemistry, C. Kandasamy Naidu College for Women, Cuddalore on 11th February, 2020 on “Applications of NanoScale Science and Engineering”. Prof. Jancy Sophia gave introduction to Nanotechnology and brief history of research in nanomaterials. She explained changes of physical and chemical properties of materials at nanoscale. She also explained the applications of nanomaterials in the field of cosmetics, space technologies, diagnostics and therapeutic practices, especially treating cancer, gene therapy and in vitro diagnostics. She also discussed how nanoscale material has made a difference in many areas of engineering and technology, such as energy, environmental pollution control, textile, automobile and electronics. The entire session was very interactive and students were allowed to ask their queries during the whole session.

Electronic Circuit Design in E-Sim

Objective:

The aim of the workshop was to design electronic circuits using Electronics Simulation (E-Sim) software and to gain hands on experience in designing electronic circuits and perform simulations.

About E-Sim:

E-Sim is a CAD tool that helps electronic system designers to design, test and analyze their circuits. But the important feature of this tool is that it is open source and hence the user can modify the source as per his/her need. The software provides a generic, modular and extensible platform for experiment with electronic circuits. This software runs on all Ubuntu Linux distributions and some flavors of Windows. It uses Python, KiCad and Ngspice.

Outcomes:

Learn how to develop and employ circuit models for elementary electronic components, e.g., resistors, sources, inductors, capacitors, diodes and transistors. Gain an intuitive understanding of the role of filter design, amplifiers, diode and rectifier circuits.

REPORT

The objective of this workshop is to enhance student's practical & technical skill and to make them compatible with industry. To fulfill this, the department of Electronics & Communication Engineering has organized one day workshop on "Electronic circuit design in E-Sim" by Mrs. D. Umamaheswari, Asso. Professor & Mr. S. Durairaj, Asst. Professor for 2nd year ECE students held on 11th July 2020. The workshop was aimed to provide knowledge about simulation of electronic circuit in E-Sim software, implementation of electrical and Electronic circuit. They started with introduction of E-Sim, benefits of the using E-sim and its applications. They explained that before directly implementing the circuit, it is necessary to simulate it on software, so when the circuit is being performed on bread-board, it becomes easier. They explained schematic design of circuit on software E-Sim and pointers to make precise schematic design. basic circuits were taken like Full wave bridge rectifier, Dual power supply, Active filters and so on. They designed and explained the many circuits on E-Sim and simulated at the end. At the end of the workshop, there was a feedback session, in which students gave their genuine feedback of the workshop. Students actively participated in this workshop and requested for more such workshops and industrial visit in the similar way to gain more practical skills.

Objective:

This Virtual reality workshop is a simulated 3D environment that enables users to explore and interact with a virtual surrounding in a way that approximates reality, as it is perceived through the users' senses.

Outcomes:

After completion of workshops get Visualizing inherently abstract concepts in physics, engineering, mathematics, chemistry, and biology such as exploring geometric shapes in 3D, following signals through the nervous system, and seeing the behavior of physical structures under different loads and environmental conditions.

REPORT

Department of Computer Science and Engineering has arranged a Guest lecture programme on "Virtual Reality" for CSE students conducted by Mrs.K.Poornambigai, AP/CSE & Mrs.Z.Asmathunnisa AP/CSE, St.Anne's College of Engineering and Technology, Panruti on 07.02.2020 between 3:30p.m. to 4.30 pm. They discussed about the basic principles of Virtual Reality. Virtual reality is a simulated 3D environment that enables users to explore and interact with a virtual surrounding in a way that approximates reality, as it is perceived through the users' senses.

Virtual reality is the creation and application of a simulated world. This virtual world is separate from the one the user experiences on a daily basis. Despite being a completely fabricated realm, designers of virtual reality have the goal of making the world as believable as possible. It doesn't have to be real per se, but it does need to make enough sense to trick the user's mind into being immersed in the space before them.

While this may sound an awful lot like traditional video games, there is a key difference between true virtual reality experiences and those digital worlds that remain relegated to flat screens. VR experiences incorporate headsets, motion sensors, and wearable equipment to sell the idea that the person is actually participating in the activity at the location in question. The complexity of most VR setups often requires large spaces and may even take up full auditoriums in some commercial venues. Video game controllers may be used, but most VR companies have their own proprietary controllers that require motion to operate. The students got more benefitted from this guest lecture.

Title: Guest Lecture on "Design and Fabrication of Audio System"

Description:

Mr. S. Kavimani, Technical Lead, Master Audio from Vadalur, lectured about the specific components of audio-related circuits and electronics. Audio electronics can be summarized as converting sound to electrical signals, processing the electrical signals, and turning these processed signals back into sound. This is a straight forward objective; nevertheless, this particular discipline of electrical engineering covers many areas of the EE world. In fact, many practicing engineers spend their entire careers researching, developing; and designing audio electronics and related equipment.

Our Guest gave us a brief idea about the installation of components for optimum performance, from custom speaker baffles, tuned subwoofer enclosures and the new range of over-sized head.

DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING **IOT USING ARDUINO FOR ELECTRICAL ENGINEERING APPLICATIONS** **REPORT**

A Five-Day Value Added Course on “IoT Using Arduino for Electrical Engineering Application” from 23rd to 27th September, 2019, held at St. Anne’s College of Engineering and Technology, Panruti was organized by Department of Electrical and Electronics Engineering. The course led by Mr. Salai Deva Thirumani, Technical Engineer, AIDELTECZ, Pudhukottai and the goal of the course was to prepare the students to think for a demonstrator project on IoT in the domestic context.

The course exposed concerns about new dimension surfaces that might be exposed by pervasive deployment of IoT devices, and identified the need for IoT data structures that layer data with contextualized information, device identity, application definition, and permissions for use. The key themes that emerged from presentations and discussion covered social and technical aspects of IoT deployment in the home. Participants homed in on energy management and micro-trading within a street or a district, and how well IoT and voice-activated devices would be accepted, when they are part of a standard house design, rather than being fitted by geeky enthusiasts. Tools and advisory

frameworks for procurement, deployment and maintenance of IoT systems were also discussed, along with the qualification of products and services. The students were exposed to a great level of innovation by the resource person and sparked the listener to see every component in engineering applications.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

VALUE ADDED COURSE ON IOT FOR SMART APPLICATIONS

REPORT

The Department of Electronics and Communication Engineering (ECE) in association with Electronics and Communication Scientia Association (ECSA) has organized a value added course on "IOT for smart applications" from 25.08.2019 to 30.08.2019.

Report:

The Department of Electronics and Communication Engineering (ECE) in association with Electronics and Communication Scientia Association (ECSA) and Institute Innovation Council (IIC) has organized a value added course on "IOT for smart applications". The aim of the course is to make the students to learn the concepts of sensing, actuation and communication and to implement them practically using IOT. All the students of ECE department had participated in this course. Students were separated into batches and started working with IOT using Arduino. The course covers the development of IOT prototypes-including devices for sensing, actuation, processing and communication in order to develop skills and experiences. Students were working simultaneously practically during the course. The Hands-on training taught them how to work with Arduino interfaced with embedded systems. They also learnt to develop appliances using Arduino. At the end of each session the students were evaluated with a test conduction in which the students are tested based on their performance. At the end of the day all the students learnt and gained knowledge on how to work IOT using Arduino.

Electronic Circuit Design in E-Sim

Objective:

The aim of the workshop was to design electronic circuits using Electronics Simulation (E-Sim) software and to gain hands on experience in designing electronic circuits and perform simulations.

About E-Sim:

E-Sim is a CAD tool that helps electronic system designers to design, test and analyze their circuits. But the important feature of this tool is that it is open source and hence the user can modify the source as per his/her need. The software provides a generic, modular and extensible platform for experiment with electronic circuits. This software runs on all Ubuntu Linux distributions and some flavors of Windows. It uses Python, KiCad and Ngspice.

Outcomes:

Learn how to develop and employ circuit models for elementary electronic components, e.g., resistors, sources, inductors, capacitors, diodes and transistors. Gain an intuitive understanding of the role of filter design, amplifiers, diode and rectifier circuits.

Report

A two days workshop on “Electronic Circuit Design in eSim” was conducted by Department of Electronics and Communication Engineering from 19th July 2019 to 20th July 2019 at VLSI/Software Lab. The resource person were Mrs. D. Umamaheswari, ASP/ECE and Mr. S. Durairaj, AP/ECE, explained the working of eSim and Open Source Software (FLOSS) EDA tool for circuit design, simulation and PCB design. eSim offers similar capabilities and ease of use as any equivalent proprietary software for schematic creation, simulation and PCB design, without having to pay a huge amount of money to procure licenses. Hence it can be an affordable alternative to educational institutions and SMEs. It can serve as an alternative to commercially available/ licensed software tools like OrCAD, Xpedition and HSPICE. II year ECE Students actively participated in the workshop and exposed to open source circuit designing platform.
